AnoxKaldnes wins strategic contract in Brazil with Lagoon-Guard™

AnoxKaldnes has been awarded a 1.2 million Euro contract as sub-supplier to Veolia Water Systems in Brazil. The innovative Lagoon-Guard™ developed by AnoxKaldnes will upgrade the capacity of the wastewater treatment plant at Suzano Bahia Sul, one of the major pulp and paper suppliers in Brazil. The Bahia Sul mill is to expand its production of bleached eucalyptus pulp and so the capacity the existing treatment plant has to be expanded as well. The AnoxKaldnes Lagoon-Guard™ process was selected as the best solution and will be delivered turn-key by Veolia Water Systems based on AnoxKaldnes design and directions.

“This project is not only one of the largest we have delivered, but it is also strategically very important for the establishment of AnoxKaldnes as a key solution provider in the Brazilian market”, says Thomas Welander, CEO of AnoxKaldnes Global. He continues, “Brazil is one of the most expansive markets for the pulp and paper industry and so a very interesting opportunity for AnoxKaldnes as we have vast experience with pulp industry wastewaters. We consider this contract to be a major break-through as we forge ahead on a number of other proposals for solutions in wastewater treatment both in industrial and municipal sectors in Brazil”.

AnoxKaldnes is an independent developer and global provider of leading edge technology for biological treatment of industrial and municipal wastewater. For more information about AnoxKaldnes products and services visit us at www.anoxkaldnes.com
